## **DETAILED ACTION**

### ***Claim Objections***

1. Claims 2 and 4-6 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim.

Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The language of claims 2 and 4-6 are functional in content and fail to explicitly provide structural limitations, which would further limit the parent claim.

2. Claims 1, 3 and 6 are objected to because of the following informalities: The claims recite "the hub of said central body". The hub has not been properly introduced to the claims; however, the examiner interprets the intent as being a central portion or area of the central body. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wiggins et al. (6,276,242).

Wiggins et al. ('242) disclose a drain compression wrench, which has a generally circular shaped central body and a plurality of spokes extending outwardly from the outside circumferential edge. Wiggins et al. ('242) disclose the claimed invention except

Art Unit: 3723

that the tool of Wiggins et al. ('242) includes a shaft 16 affixed to the central portion of the central body, and a handle that may be permanently affixed or removably attached to the shank. However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to separate the shaft from the central body, as suggested by the prior art tool as illustrated in Fig. 2 or Wiggins et al. ('242), since it has been held that constructing a formerly integral structure in various elements involves only routine skill in the art. *In re Dulberg*, 289 F.2d 522, 523, 129 USPQ 348, 349 (CCPA 1961).

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Machovsky, Lawson, Ure, Thompson, Piascik, Cronin, II et al., Davey, Iwinski, Williams et al., Keating, and York each disclose a tool.
